Subject: Global Warming is Real, Plan Accordingly

The plan to enlarge Los Vaqueros Dam is great! We need to enlarge all dams and build more.

The people on the East are beginning to wonder if the heat, storms and hurricanes are due to Global Warming and, if they are, they will back and worse every year, from now on, and EVERYONE will believe Global Warming is real.

Our problem is that early Spring snow melt will bring floods followed by dry and hot summers with fire risks.

Must we wait until they happen before we begin to study how to deal with that?

Remember, GW only gets worse and measures may be too late to prevent flood damage, unnecessary flood damage that is.
